1 Preface

The RoboMaster University Series (RMU), initiated by DJI, is one of the events under the National College Student Robot Competition and is a robot competition and academic exchange platform created for technology enthusiasts worldwide. Since its founding in 2013, it has upheld the philosophy of 'giving glory to youth, giving thinking its power, and serving young engineers worldwide in becoming dreamers who pursue excellence and are action-oriented'. It is committed to cultivating and attracting well-rounded talents with an engineering mindset, while spreading the beauty of technology and the idea of technological innovation widely to the public.

The National College Student Robot Competition RoboMaster University Championship (RMUC) focuses on participants' comprehensive application of science and engineering disciplines and their engineering practice ability, fully integrating many robot-related technical disciplines such as 'mechanical engineering',

'embedded system design', 'control algorithms', 'electrical engineering', 'integrated communication and sensing', 'autonomous navigation' and 'human-machine interaction'. It also innovatively combines popular presentation styles with robot competition, making robot confrontation more intuitive and intense and attracting the wide attention of technology enthusiasts and the general public.

The National College Student Robot Competition RoboMaster University League (RMUL) is bid for by local academic institutions and universities and draws in surrounding universities to participate. It aims to promote regional exchange of university robotics technology, foster a strong academic atmosphere, and support regional scientific and technological innovation and development.

RMUL offers two challenge events: the 3V3 Match and the Infantry Match.

2 Participation

2.1 Registration Requirements

3V3 Match: no registration restrictions

Infantry Match: Teams that successfully compete in RMUC 2025 or RMUC 2026 offline may not register for RMUL 2027 Infantry Match

2.2 Participating Teams

- participating teams are divided into Level A teams and non-Level A teams. See “Points System” for details.
- Due to restrictions of overseas laws and regulations, teams from overseas regions and countries cannot yet create teams or register on the official RoboMaster platform. Team creation and registration, subsequent Technical Assessment stages, and personnel list collection for overseas teams

  will all be conducted through Wenjuanxing. Overseas team registration entry: https://djistore.wjx.cn/vm/Q4bFVhT.aspx

the participating team is guided by the following principles:

R1 All participating teams must have the team’s person in charge (Team Captain or Team Leader Teacher) create the team on the RoboMaster Forum; teams that already exist do not need to be created again. When creating a team, complete the team information as required and obtain the invitation code by contacting RoboMaster competition affairs staff. After the team is ready, its person in charge can invite participating team members to join through an invitation link. For the specific registration process, see the Registration Guide. Registration succeeds if all requirements of this chapter are met. The Organizing Committee will open the participant list adjustment function from time to time during the season, and teams may change participating members during the open period. All information is based on what is confirmed by the last click on ‘confirm list’ within the current open period; it cannot be changed after the open period is missed. Before each event, the registration center will open one last time, and the Organizing Committee will use the final submitted information to produce and issue award certificates.

R2 The same participating team must use the same team name in different events. The team name must take the form ‘XXX Team’, where ‘XXX’ is a name customized by the team. The customized name must not exceed 16 characters (each Chinese character counts as 2 characters, each English letter counts as 1 character), and must not contain the school name, an abbreviation of the school name, an English abbreviation of the school name, words such as ‘team’, or special symbols such as ‘*/-+’. The team name must reflect the team’s enterprising spirit and comply with relevant national laws and regulations.

If the RMOC determines that the team name does not conform to the spirit of the competition, it has the right to request the participating team to change the team name.

after the participating team submits the registration information, it is not allowed to change the team name.

R3 A participating team must be based at one institution of higher education and meet the personnel role, headcount and identity requirements specified in ‘2.3 Participants’.

R4 In principle, only one participating team from a school is eligible to compete in the same event (challenge event). If a school’s campuses are in different cities or a similar situation prevents students who intend to participate from forming a team together, the school may form teams from different campuses after verification by the Organizing Committee. If a school has more than one team registering, the specific registration review rules are given in

the 'RoboMaster 2027 University Series Representative Team List Announcement'. Registrants must ensure that registration information is complete and accurate,

and bear the corresponding responsibility; registrants bear all consequences of omissions or errors in registration information. In special circumstances, they may contact the Organizing Committee to explain, and the Organizing Committee will handle the matter according to the situation. The Organizing Committee reserves the right of final interpretation.

If the participating team does not meet any of R1-R4, the RMOC will reject the application. The participating team can resubmit if it is modified to meet the requirements.

R5 Joint teams are not allowed.

A team that registered for RMUC as a joint team in the current season is not allowed to register for RMUL under the same joint team name.

R6 Any one participant is only allowed to participate in one participating team throughout the season.

R7 If any one of the "five different" principles is not satisfied between participating teams, it is considered to be the same participating team.

- 'Five Differences' principle: different team names, different team members, different advisor teachers, different affiliated organizations (school units such as colleges), and different participating robots.
- In RMUL, the 3V3 Match and Infantry Match are regarded as a whole; different teams from the same school are not allowed to take part separately in the two matches.
- The first principle that distinguishes different participating teams at the same school is the team name.

R8 Provided that the registration requirements of the relevant events are met, one participating team may register for and take part in different events of the RoboMaster University Series at the same time (including RMUC and RMUL).

R9 The Organizing Committee regards the same participating team taking part in different events in the same season as a whole and handles all event affairs processes uniformly (including material donation, material purchase and participation support). After season registration ends, the whole cannot be split.

2.3 Participants

The RoboMaster competition advocates teamwork. To encourage participants to take on important roles in their teams, the RoboMaster Organizing Committee selects awards such as Outstanding Team Captain, Outstanding Team Mentor and Outstanding Advisor to recognize those who contribute positively to RoboMaster events. For details, see 'Table 5-8 Outstanding Contribution Award Settings'.

Participant positions and responsibilities are as follows:

- Participants may not hold more than one position.
- Each participant must meet the corresponding status and, if necessary, show the relevant proof at the competition site.
- Reserve Members and Operations Managers apply only to the 3V3 Match.

- Award eligibility: Team Mentors and Reserve Members are not eligible for awards. They may receive only the electronic proof of participation for the current season issued by the Organizing Committee. The certificate text does not name an event site; it gives only the general event name.
- In addition to the official positions required below, participating teams may create other positions according to their needs, such as technical group leaders and robot-type group leaders.

Table 2-1 Participant Positions and Responsibilities

Position	Position Description	Responsibilities	Status	Number
Advisor Teacher	Team advisor teacher	- Responsible for the team's organizational development, daily management and major decisions • Responsible for the team's cultural development and helping members establish positive cultural values • Responsible for the team's inheritance and development	Faculty or staff who graduated before March 2027 and hold research or teaching qualifications at the school during September 2026 • August 2027	0-4
Team Leader Teacher	- Among the Team Mentors, the teacher in charge - The primary liaison with the Organizing Committee	- Guide the team in building robots - Coordinate on-campus resources, guide the team in drawing up a project plan and help the team complete the competition smoothly - During the competition, ensure the personal and property safety of all team members - During the competition, actively cooperate with the work of the Organizing Committee		1
Team Mentor	Provides guidance and support with competition experience to the current team	- Provide guidance and support to the team in technical innovation, tactical design, team management, team building, etc. • Serve team inheritance	- Has competed on any team in past RMU seasons • Full-time junior college, undergraduate, master's and doctoral students, etc. of institutions of higher education who hold proof of enrollment at their school during September 2026 • August 2027	0-5

Position	Position Description	Responsibilities	Status	Number
		- Can take on actual robot building work and other competition affairs	Full-time junior college, undergraduate, master's and doctoral students, etc. (continued)	
Official Team Member	Includes Team Captain, Publicity Manager, Project Management, Business Manager, ordinary team members, etc.	See the table below	Full-time junior college, undergraduate, master's and doctoral students, etc. of institutions of higher education who hold proof of enrollment at the school of the participating team during September 2026 • August 2027	- 3V3 Match: 4-18 • Infantry Match: 2-5
Reserve Member	Reserve members of the team who are temporarily in a period of personal study and growth and may become Official Team Members after assessment and promotion by the participating team	Assist Official Team Members in completing the competition		0-5

Table 2-2 Official Team Member Positions and Responsibilities

Position	Position Description	Responsibilities	Number
Team Captain	- Core team member • Person in charge of technology and tactics • Person in charge of cultural development • The Organizing Committee's main contact person	- Responsible for forming the team, recognizing and employing people well, and deploying forces; coordinate personnel selection and training, allocation of in-team quotas and award quotas, daily personnel management, replacement and elimination, etc. • Responsible for coordinating the formulation and review of technical plans and tactical plans, identifying risks and making major decisions • Responsible for building team culture and helping members establish positive cultural values • Responsible for accumulating and retaining the team's technical, management and other documents, for building process mechanisms and for review and iteration, helping the team's inheritance and development • During the competition, maintain order among personnel at the venue, organize participation in team leader meetings, and handle key event processes such as confirming the result of each match and appeals	1

Position	Position Description	Responsibilities	Number
Project Management	- Core team member • Manager of project progress and risk	- Responsible for drawing up plans for each stage of the competition (goals, schedule, cost), collecting feedback on relevant needs and suggestions, controlling the process of each piece of work, identifying and giving early warning of project risks, and closing the loop on results • Responsible for communication and coordination within the team, helping with in-team team building and institutional system building, and solving resource and schedule problems encountered by the project • Responsible for researching the team's project management processes, methods, tools and systems, and promoting and implementing them within the team Note: • Project Managers are advised to learn PMP basics and study general project management concepts and theory • As an important management member of the participating team, the Project Manager is advised to work closely with each robot R&D subproject, take part in and witness the whole process from robot design to building, and proactively learn the necessary basics	0-1
Operations Manager	- Core team member • Responsible for business development of operations modules such as team publicity, sponsorship, logistics and finance • Executor of team culture inheritance and building	- [Team Building] Coordinate the team's overall operating rhythm and establish standardized internal operating mechanisms; allocate resources and control operating costs reasonably, provide solid logistics support for the technical R&D team and relieve preparation pressure - [Culture Inheritance] Establish and improve the team's data repository (including technical iteration history, alumni destinations, honors and achievements, etc.), form standardized documents and SOPs, and carry forward team culture and assets - [Publicity Output] Formulate an annual publicity strategy and, combining event hotspots with team stories, produce high-quality team content through video, images and text, community activities and other forms, giving members a strong sense of belonging to the team - [Business Ecosystem] Actively respond to and strictly implement official sponsorship norms and management requirements; formulate the team's sponsorship strategy, set up a team fund and related support organizations, and obtain funding, equipment and other sponsorship support for the team to give back to the team's development	0-2

Position	Position Description	Responsibilities	Number
Ordinary Team Member	Basic team member	-	-

2.4 Personnel Directions

When submitting the list in the registration system, the Team Captain must select the direction to which each Official Team Member and Team Mentor belongs, classified as follows:

Table 2-3 Personnel Direction Classification

Direction	Description	Related Majors
Mechanical	Carry out robot structural design, assembly and maintenance; responsible for the design cost and reliability of the robot structure.	Theoretical and Applied Mechanics; Engineering Mechanics; Mechanical Engineering; Mechanical Design, Manufacturing and Automation; Mechatronics Engineering, etc.
Embedded	Write low-level robot drivers, deploy the operating system, and configure and develop communication protocols; responsible for the reliability of interaction between the microcontrollers of the embedded platform and sensors and actuators, and for system stability.	Electronic Information Engineering; Communication Engineering; Internet of Things Engineering; Automation; Computer Science and Technology: Measurement and Control Technology and Instruments; Electrical Engineering and Automation, etc.
Control	Carry out robot kinematic modeling and the design and implementation of control strategies; responsible for the output accuracy of robot motion commands and for the speed and stability of the whole robot's motion response.	Automation; Electrical Engineering and Intelligent Control; Intelligent Equipment and Systems; Robotics Engineering; Mechatronics Engineering; Electronic Information Engineering; Communication Engineering, etc.
Algorithm	Design and develop robot vision, navigation and planning-decision algorithms, and select and debug the robot computing platform; responsible for the design cost and reliability of the components related to the robot computing platform and of the host-computer algorithms.	Automation; Artificial Intelligence; Robotics Engineering; Computer Science and Technology; Software Engineering; Electronic and Computer Engineering, etc.
Hardware	Select, design and develop the robot hardware platform (including but not limited to supercapacitors, control boards, motor ESCs, etc.); responsible for the design cost and reliability of the robot hardware platform.	Electronic Information Engineering; Electronic Science and Technology; Microelectronics Science and Engineering; Integrated Circuit Design and Integrated Systems, etc.
Software	Develop the competition robot custom client, host-computer software and various debugging tools, and other application software that helps team building and development, such as team member management system development and simulator development.	Computer Science and Technology; Software Engineering; Data Science and Big Data Technology; Network Engineering; Electronic Information Engineering, etc.

Direction	Description	Related Majors
Operations	Operations is subdivided into: publicity, sponsorship, logistics, finance	Unlimited

2.5 Rules Communication

The Organizing Committee provides the following communication channels. Working hours are: working days 10:30–12:30 and 14:00–19:30. For more contact methods
and the Q&A norms, see the RoboMaster RMOC Official Channels Summary and Q&A Norms.

Table 2-4 Communication Channels

Channel	Contact Method
Forum	bbs.robomaster.com
Email	robomaster@dji.com
Phone	+86 0755-84357613
WeChat	(QR code) Note: When adding on WeChat, please add the remark [School name + Position + Name].

3 Season Schedule

The season schedule is for reference only; the specific times are subject to the latest announcements published by the Organizing Committee.

The RMUL 2027 season schedule is divided into online and offline schedules. RMOC recommends that participating teams plan ahead in preparation for the season, budget and plan for robot production, and assess manpower and funding needs to avoid wasting money.

participating teams need to complete their enrollment, complete and pass the corresponding Technical Assessment before the deadline to qualify, and receive the corresponding RoboMaster product education discount provided by RMOC (hereinafter referred to as the “Product Discount”).

- For Technical Assessment specifications, see “4 Technical Assessment”.
- For the product discount corresponding to each Technical Assessment stage, see the ‘RoboMaster 2027 Robot Competition Material Purchase Instructions’.

Table 3-1 Online Schedule

Schedule	Stage	Description
2026-10-20 15:00 to 2026-10-30 15:00	Registration	Log in to the RoboMaster Forum and complete registration as required
2026-12-09 15:00 to 2026-12-10 15:00	Technical Assessment: Referee System Basic Assessment	Obtain submission permission for the Full-Form Assessment Note: The Organizing Committee will additionally collect information on the use of the Referee System and will give rectification suggestions to teams whose usage is poor.
2027-01-04 15:00 to 2027-01-06 15:00	Technical Assessment: Full-Form Assessment	- Obtain permission to borrow the full set of Referee System • Obtain submission permission for participation feedback
2027-01-21 15:00 to 2027-01-26 15:00	Participation Feedback	Participating teams first select their preferred sites; the Organizing Committee will, taking into account the region where each school is located, finally decide the list of participating teams for each site.

Table 3-2 Offline Schedule

Schedule	Item
March-April 2027	- RMUL 2027 will not have overseas sites; 9 mainland sites are expected. • In this season, a participating team may take part in only one site, and obtains awards and points at that

Schedule	Item
	The team earns awards and points at the event. ● In the group round-robin stage of the 3V3 Match, teams at each competition site are divided into groups according to the actual number of participating teams. Each group has only one seed team: the participating team ranked highest on the university points leaderboard at that site. Note: About colleges and universities in Hong Kong, Macao, Taiwan and overseas: This season's university scoreboard only includes teams that have successfully participated in RMUC offline competitions at least once in the previous 3 seasons, and participate in the ranking after converting according to the rules of the points system.

4 Technical Assessment

The Technical Assessment lets participating teams demonstrate their technical level, guides them to plan their preparation and team succession sensibly, and builds team members' overall abilities in requirements analysis, cost budgeting, data analysis and report writing. All participating teams must complete the corresponding Technical Assessment stages within the specified time ranges and according to Organizing Committee requirements, taking the initiative to fully demonstrate their team's strength.

RMUL 2027 mainly includes two Technical Assessments: the Referee System Basic Assessment and the Full-Form Assessment. The latest tasks and requirements for each Technical Assessment stage are as stated in the forum announcement. For the schedule of each stage, refer to '3 Season Schedule'.

The submission specifications for the forms and videos in each Technical Assessment section are as follows:

For forms and videos, the participating team needs to attach them as an attachment to the report of each session of the forum.

Table 4-1 Submission Content Specifications

Document Type	Specification
Table	- Format: Excel • Font: Source Han Serif • Regular (Chinese) or OpenSans-Regular (English) • Table format: enable automatic text wrapping, and auto-fit row heights and column widths • Alignment: unless specially necessary, keep all text vertically centered, and uniformly left-aligned or center-aligned horizontally
Video	- Show the full lineup, and attach a group photo of all robots (if there are multiple robots of the same type, all must be shown) • The video must begin by stating the school name, shooting date and shooting location • The video frame must show the current season's backdrop KV; specific requirements and files will be published in subsequent announcements • Resolution higher than 720P, with subtitles or placards that clearly explain every process in the video • Show only valid content and keep the video pacing compact

4.1 Referee System Basic Assessment

The Referee System Basic Assessment mainly covers the relevant content on the number and basic functions of the Referee System onboard modules, as described in the RoboMaster 2027 University Series Robot Building Specifications Manual, the RoboMaster 2027 University League Rules Manual and the RoboMaster Referee System User Manual.

The Referee System Basic Assessment content mainly covers the quantity and basic functions of the Referee System onboard modules, as described in the RoboMaster 2027 University Series Robot Building Specifications Manual, the RoboMaster 2027 University League Rules Manual, the RoboMaster Referee System User Manual and related documents. The basic assessment is conducted per team and is a prerequisite for borrowing Referee System onboard modules.

4.2 Full-Form Assessment

Number of submissions: 1
Passing condition: Reach a specified score.
Submission content and requirements:

Full-Form Demonstration: a video showing the actual completion status of each robot type, supported by video or other materials. See the 'RoboMaster
2027 University Series Technical Assessment Progress Assessment Rules'.

5 Awards

- Award settings are subject to the latest Participant Manual or official website announcement. Award settings may be adjusted; use the latest Participant Manual for each competition site. Award names may also be adjusted; use the names on the certificates actually issued.
- The number of awards at each level for each event will be adjusted according to the actual number of participating teams eligible for awards. See the latest version of the Participant Manual announced officially.
- If a participating team withdraws or fails to participate within 2 weeks before the competition begins (by failing to check in or to pass Pre-Match Inspection for any match), it is deemed to have forfeited its eligibility for awards this season.
- The number of awards is calculated as the base number of teams eligible for awards multiplied by the award ratio, rounded to the nearest integer. If the base is fewer than 4 teams, the number of awards will be reviewed and allocated manually. See the actual numbers to be announced later.

5.1 3V3 Match

In the 3V3 Match, all teams that have obtained participation eligibility are divided into Tier-A teams and non-Tier-A teams and compete together, with awards given by group according to placement.

Placements (champion, runner-up, third place, fourth place, top eight, etc.) are based on the actual match results and are unrelated to the group in which the team is placed.

- The number of first- and second-prize awards is calculated as the number of teams in each group that advance to the knockout stage multiplied by the award ratio.
- If placement cannot be determined after grouping, teams are ranked by time-averaged net Control Points advantage.

Table 5-1 Tier A Team Awards

Award	Quantity	Reward
First Prize	40%/group	First Prize certificate
Second Prize	60%/group	Second Prize certificate
Third Prize	Teams that do not advance to the knockout stage	Third Prize certificate

Table 5-2 Non-Tier A Team Awards

Award	Quantity	Reward
First Prize	40%/group	First Prize certificate
Second Prize	60%/group	Second Prize certificate

Award	Quantity	Reward
Third Prize	Teams that do not advance to the knockout stage	Third Prize certificate

5.2 Infantry Match

In the Infantry Match, all teams that have obtained participation eligibility are given awards according to match placement.

- The number of awards is calculated as the base number of teams eligible for awards multiplied by the award ratio.
- If placement cannot be determined, teams are ranked by time-averaged net HP advantage.

Table 5-3 Infantry Match Awards

Award	Quantity	Reward
First Prize	15%	First Prize certificate
Second Prize	25%	Second Prize certificate
Third Prize	Several	Third Prize certificate

5.3 Robot Competition Awards

The number of Robot Competition Awards is calculated using the following table, based on the selection criteria and the number of teams at all RMUL 2027 competition sites for the corresponding event. If the result is not an integer, it is rounded to the nearest integer.

5.3.1 Award Settings

The 3V3 Match Robot Competition Awards are as follows:

Table 5-4 3V3 Match Robot Competition Award Settings

Award Setting	Description
Robot type	Infantry Robot, Heavy Robot (Damage Output track, Assembly track), Sentry Robot
Quantity	- First Prize: 15% • Second Prize: 25% • Third Prize: Several

Award Setting	Description
	- Excellence Award: Several Note: For each robot type, the number of awards at each level will be adjusted according to the actual number of teams eligible for awards and each robot's actual performance in the matches.
Reward	Award certificate (team and individual, electronic version)

The Infantry Match Robot Competition Awards are as follows:

Table 5-5 Infantry Match Robot Competition Award Settings

Award Setting	Description
Robot type	Infantry Robot
Quantity	- First Prize: 15% • Second Prize: 25% • Third Prize: Several • Excellence Award: Several Note: The number of awards at each level for each robot type will be adjusted according to the actual number of teams eligible for awards and the actual performance of each robot in the matches.
Reward	Award certificate (team and individual, electronic version)

5.3.2 Selection Criteria and Process

Based on each robot's actual performance in the matches, specific data are selected for ranking and awards are given according to set ratios. Robots eligible for selection and minimum award eligibility must meet the Pre-Match Inspection standards.

Table 5-6 3V3 Match Robot Data Selection

Robot Type	Maximum Number of People	Selected Data Type
Heavy Robot	Damage Output track: 7 people	Time-averaged damage (total damage dealt by the robot / total official match duration of the robot's team)
	Assembly track: 5 people	Per-round average assembly efficiency (the harmonic mean of assembly duration for each round)

Robot Type	Maximum Number of People	Selected Data Type
Infantry Robot	5 people	Time-averaged damage (total damage dealt by the robot / total official match duration of the robot's team)
Sentry Robot	6 people	Time-averaged damage (total damage dealt by the robot / total official match duration of the robot's team)

Table 5-7 Infantry Match Robot Data Selection

Robot Type	Selected Data Type
Infantry Robot	Per-round average of damage dealt / damage taken (only rounds in which the Infantry Robot took more than 25 damage are included)

5.4 Outstanding Contribution Awards

The team of an Outstanding Contribution Award winner must show good sportsmanship and have no violations that seriously breach the competition rules or the spirit of civilized competition.

- Winners of Outstanding Team Leader (Group), Outstanding Project Management, Outstanding Operations Manager and Outstanding Team Mentor must publish a management or operations experience share on the RoboMaster Forum within 2 weeks after the selection results are announced, and are obligated to participate in exchange meetings and surveys organized by the Organizing Committee.

- Outstanding Team Leader (Group), Outstanding Project Management and Outstanding Operations Manager are selected only from among participants in the 3V3 Match, and the participant's team must meet both of the following conditions:

  1. Successfully participated in the 3V3 Match;
  2. Did not successfully participate in the RMUC 2027 Regional Competition.

5.4.1 Award Settings

The Outstanding Contribution award settings are as follows:

Table 5-8 Outstanding Contribution Award Settings

Award	Quantity	Reward
Outstanding Advisor (Group)	No more than 10 people in total in the season	- Award certificate (individual) • Prize of RMB 8,000 (before tax)
Outstanding Team Leader (Group)	No more than 5 people in total in the season	- Award certificate (individual) • Prize of RMB 5,000 (before tax)

Award	Quantity	Reward
Outstanding Project Management	No more than 5 people in total in the season	- Award certificate (individual) • Prize of RMB 5,000 (before tax)
Outstanding Operations Manager	No more than 8 people in total in the season	- Award certificate (individual) • Prize of RMB 5,000 (before tax)
Outstanding Team Mentor	No more than 8 people in total in the season	- Award certificate (individual) • Prize of RMB 3,000 (before tax)

5.4.2 Selection Criteria and Process

Table 5-9 Outstanding Contribution Award Selection Criteria and Process

Award	Selection Criteria	Selection Method
Outstanding Advisor (Group)	- Guides the student team and its culture building, shows a high sense of responsibility, is conscientious toward every team member, cares about students' growth and development in the competition field, and is deeply loved by students • Leads the team toward sustained healthy development and progress, and guides the team in succession work such as technical knowledge retention, retention of core members and resource coordination • Establishes or improves the team management system for the season, including but not limited to organizational structure, division of labor mechanisms, assessment systems and training systems, achieves results in actual operation, and promotes the team's long-term stable development • Discovers outstanding talent in the team, provides guidance and support for team members' further study and employment, and actively supports and participates in RoboMaster talent recommendation work in accordance with the relevant procedures	- Candidates apply by submitting materials through the award application portal (to be opened later); RMOC will make internal nominations based on the situation in the season, and select the best candidates comprehensively considering the application materials • If the "Policy on Talent Recommendation by Advisors of RoboMaster University Series" is satisfied, RMOC will add a "Taoli Fenfang" bonus based on recommendations: RMB 1,000 per person * the number of people successfully recommended (before tax)

Award	Selection Criteria	Selection Method
Outstanding Team Leader (Group)	- Can set reasonable preparation goals and plans based on the team's actual situation, and organize team members to carry out preparation and participation work in an orderly manner • Can coordinate team personnel and resources, clarify task division and follow up on implementation, and promptly organize solutions to problems arising during preparation and participation • Has a strong sense of belonging to the competition and the team, leads by example, fosters a united, cooperative and proactive team atmosphere, and pays attention to team members' participation and growth • Can establish and implement basic management and collaboration mechanisms according to the team's needs, and lead the team to set and gradually achieve long-term competition goals for healthy development • The team is graded by performance level, and the performance level this year is maintained or improved compared with previous years Progress levels: 1. Did not obtain League participation eligibility 2. League top 32 3. League top 16 4. League top 8 5. League top 4	Candidates apply by submitting materials through the award application portal (to be opened later); RMOC will select the best candidates based on the materials
Outstanding Project Management	- Can set a reasonable project plan based on the team's preparation goals, clarify task division and key milestones, and continuously follow up on implementation • Can assist the team leader in requirements communication, progress synchronization and task handover, and keep all work proceeding in an orderly manner	Candidates apply by submitting materials through the award application portal (to be opened later); RMOC will select the best candidates based on the materials

Award	Selection Criteria	Selection Method
	- Can promptly identify schedule, quality and resource problems during preparation, organize relevant members to solve them together, and ensure the project advances as planned; can establish and optimize practical collaboration processes according to the team's needs, keep good project records, retrospectives and experience transfer, and improve team collaboration efficiency.	
Outstanding Operations Manager	- [Team Building] Establishes and retains a mature team operations methodology, effectively improving team cohesion and management efficiency; can properly mobilize resources from all parties to ensure the overall health and sound operation of the team - [Cultural Inheritance] Has a relatively mature cultural dissemination system; archives of talent and technical achievements over the years are well organized, the competition culture is deeply rooted, and team members show a high sense of cultural identification with the competition in the official culture survey - [Publicity Output] Publicity content is of very high creativity and quality, produces impressive dissemination cases, and has established high visibility and positive influence on campus and across the whole competition ecosystem - [Business Ecosystem] Closely conforms to the official commercialization specifications, submits a high-quality sponsorship plan, and successfully implements high-value, sustainable internal and external cooperation projects	Candidates apply by submitting materials through the award application portal (to be opened later); RMOC will select the best candidates based on the materials
Outstanding Team Mentor	- Can serve the team's succession, motivate veteran members to provide necessary support to the team, and offer constructive and practical suggestions and guidance in areas such as technical accumulation, system building, personnel pipeline and team culture	Candidates apply by submitting materials through the award application portal (to be opened later); RMOC will select the best candidates based on the materials

Award	Selection Criteria	Selection Method
	- Can leave their own experience with the team in forms such as technical documents or process mechanisms, helping the team with technical knowledge retention and management building and promoting the team's long-term stable development.	

5.5 Organization Awards

5.5.1 Award Settings

The organization awards are set as follows:

Table 5-10 Organization Award Settings

Award	Quantity	Reward
Rising Star Award	Several	Award certificate (team)
Torch Inheritance Award	Several	- Award certificate (team) • Prize of RMB 5,000 (before tax)
Sportsmanship Award	No more than 5 in total in the season	Award certificate (team)

5.5.2 Selection Criteria and Process

The selection criteria and process for the Organizational Awards are as follows:

Table 5-11 Organization Award Selection Criteria and Process

Award	Selection Criteria	Selection Process
Rising Star Award	- Did not obtain RMUC or RMUL offline participation eligibility in the 2025 and 2026 seasons, and successfully participated in an RMUL offline competition in the 2027 season • Has not received the Rising Star Award in RMU	Determined and awarded based on registration information
Torch Inheritance Award	- Has a strong awareness of team succession, can analyze the team's succession needs in areas such as technical accumulation, system building, personnel pipeline and team culture, formulate and	Candidates are divided into self-applicants and invited applicants. After open-sourcing on the forum, RMOC will

Award	Selection Criteria	Selection Process
	- Implement corresponding systems, achieve tangible results in team building, and promote the team's stable development - Summarize and review each season based on actual experience, retain effective team succession measures and experience, and continuously iterate and optimize - Summarize effective succession measures or models that can serve as a reference and positively influence other teams	Candidates are selected comprehensively according to the above criteria, the team's actual performance during the season and its application materials.
Sportsmanship Award	- The team shows good sportsmanship (the team's penalties in official matches will be taken into account) and has no violations that seriously breach the competition rules or the spirit of civilized competition • The team is relatively active on channels such as the forum and WeChat groups, and gets along well with RMOC, volunteers and other teams • The team is willing to help others, actively open-sources, enthusiastically shares its own experience, and is willing to provide resource assistance to other teams	- Selected based on feedback from RMOC staff, other teams and event volunteers • Teams that receive more positive feedback from RMOC staff, other teams and event volunteers are given priority for the award

Appendix: Participation Safety Notice

All RoboMaster participants must fully understand that safety is the most important prerequisite for the continued development of the competition. To protect the rights and interests of all participants and event organizers, and in accordance with relevant laws and regulations, by registering for RoboMaster, all participants acknowledge and agree to abide by the following safety terms:

1. All participants must have full capacity for civil conduct and the ability to independently build and operate robots. Before building robots with products of the event organizer, SZ DJI Technology Co., Ltd., they must carefully read the registration notice, competition rules and other relevant documents.

2. During the event, ensure that building, testing and using robots will not harm one's own team members, opposing team members, referees, staff, spectators, equipment or the competition venue.

3. Ensure that the robot's structural design allows convenient safety inspection during Pre-Match Inspection, and actively cooperate with the event organizer's Pre-Match Inspection.

4. The use of fuel-powered engines, explosives or hazardous chemical materials is prohibited. Hydraulic or other power methods that may cause pollution are also prohibited.

5. At any stage of R&D, preparation and participation, team members must pay full attention to safety and comply with the RoboMaster University Series Battery Safety Specifications; advisors should take responsibility for safety guidance and supervision.

6. Ensure the robots are safe and their launching mechanisms are in a safe state, so that they never directly or indirectly injure participants, referees, staff or spectators.

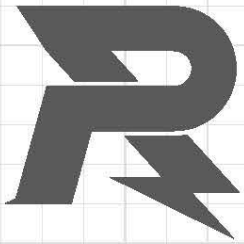

7. During R&D, training and participation, take sufficient and necessary safety measures against possible accidents, such as wearing safety goggles.
   Avoid loss of control of the control system. Urge team members to think through operating steps beforehand to prevent mistakes and collisions between team members or between team members and robots. Team members must not train alone; ensure someone can respond to accidents in an emergency. During debugging, add appropriate safety measures to the robot system, such as proper locking and emergency stop switches.

8. The participating team that caused an accident is solely responsible for all accident liability and corresponding losses arising during practice or competition from unexpected situations such as robot failure or loss of control of an unmanned aerial vehicle in flight.

9. All participating teams must strictly comply with local laws and regulations on flight control. A team's Aerial Robot flying above the competition field in a specific restricted area of the venue is an indoor flight and does not require airspace approval. To ensure flight safety, the Aerial Robot is connected by a rope to a ground anchor. If an unexpected situation occurs, such as the Aerial Robot breaking free of its safety tether, the pilot must land it and stop its propellers as soon as possible; continued flight is strictly prohibited. Participating teams' Aerial Robots must not fly outdoors.

Items sold or provided by the event organizer, SZ DJI Technology Co., Ltd., such as batteries and the Referee System, must be used according to their instructions. SZ DJI Technology Co., Ltd. is not liable for injury caused by improper use. The participating team is responsible for bodily injury or property damage to itself or any third party caused by building or operating its robot.

11. Strictly abide by national or regional laws and regulations and related regulations, and ensure that robots are only used for RoboMaster-related activities and events, not illegally modified robots, and not used for other illegal purposes.
