RoboMaster 2027 RMUC Participant Manual V1.0.0 (2026-10-15)

English reference edition

The Chinese source is authoritative. English prose, tables, captions and figure keys follow the maintained Markdown translation. Original technical artwork is retained; English flowcharts replace selected Chinese diagrams. Any embedded source annotations are explained by the English keys.

Source page markers refer to physical pages of the Chinese PDF. English pagination differs because translated text is reflowed. The contents lists retain the source printed page numbers.

Source MD5: `5ef9fcc4938723ce3db7aed3fe4501c6`

Unofficial English translation of the Chinese original. The Chinese PDF governs; see the translation index for source, checksums and conventions.

V1.0.0

26th National Collegiate Robot Competition RoboMaster 2027 RoboMaster University Championship (RMUC)

Participant Manual

Compiled by the RoboMaster RMOC Published October 2026

Statement

Participants must not engage in or take part in any conduct that the RoboMaster RMOC (Organizing Committee) determines to involve public disputes, sensitive topics, offense to the public or certain groups, or other damage to the image of RoboMaster. Otherwise, the RMOC has the right to permanently revoke the competition eligibility of the violating persons.

1 Preface

The RoboMaster University Series (RMU, RoboMaster University Series) was initiated by DJI and is one of the events under the National Collegiate Robot Competition. It is a robot competition and academic exchange platform created for technology enthusiasts worldwide. Since its founding in 2013, it has always upheld the philosophy of "giving glory to youth, giving power to thought, and serving young engineers worldwide to become dreamers who pursue excellence and are action-oriented". It is committed to cultivating and attracting well-rounded talent with an engineering mindset, and to conveying the beauty of technology and the concept of technological innovation to the public at large.

The National Collegiate Robot Competition RoboMaster University Championship (RMUC, RoboMaster University Championship) focuses on assessing participants' comprehensive application of science and engineering disciplines and their engineering practice ability. It fully integrates many robot-related technical disciplines such as "mechanical engineering", "embedded system design", "control algorithms", "electrical engineering", "integrated communication and sensing", "autonomous navigation" and "human-computer interaction". It also innovatively combines popular presentation styles with robot competition, making robot combat more intuitive and intense and attracting wide attention from many technology enthusiasts and the general public.

2 Participation

2.1 Registration Requirements

A team may register if it meets any one of the following conditions:

- The team successfully passed the RMUC 2025 Mid-Term Progress assessment, or ranked within the top 104 in the RMUC 2026 Full-Form assessment (entered the video assessment stage).
- The team successfully advanced from the group stage of the RMUL 2026 3V3 competition; for non-Class-A teams, the condition may be relaxed to winning a second prize in the main awards.

> Note: - A combined team (joint team) must have at least one member team that meets the RMUC registration eligibility in order to register. - The RMUC registration conditions will be adjusted according to the actual situation of each season and determined when registration for that season opens.

2.2 Participating Teams

> Note: - Due to legal and regulatory restrictions overseas, teams from overseas regions and countries cannot yet create teams or register on the official RoboMaster platform. Team creation and registration, the subsequent Technical Assessment stages of the event, and the collection of personnel lists for overseas teams will all be conducted through Wenjuanxing (questionnaire platform). Overseas team registration entry: https://djistore.wjx.cn/vm/Q4bFVhT.aspx - The distinction between Mainland teams, Hong Kong/Macao/Taiwan teams and overseas teams is used only to explain cases where the participation process differs because of the different geographic locations of the universities.

Participating teams must follow these principles:

R1 All participating teams must have the team created on the RoboMaster forum by the team's persons in charge (team captain, lead teacher). Teams that already exist do not need to be created again. When creating a team, team information must be supplemented as the team requires; the invitation code must be obtained by contacting RoboMaster event affairs. After the team is set up, the team's persons in charge can invite team members to join through an invitation link. For the specific registration process, see the registration guide. Registration succeeds if all requirements of this section are met. The RMOC will open the participant list adjustment function irregularly during the season, and teams may change their team members during the open period. All information is based on the list as last confirmed in the current open period; it cannot be modified after the open period is missed. Before each event is held, the registration center will open one last time, and the RMOC will then use the finally submitted information to produce and issue award certificates.

R2 The same team must use the same team name when taking part in different events. The team name must take the form "XXX Team" (战队), where "XXX" is a name defined by the team. The custom part of the name must not exceed 16 characters (each Chinese character counts as 2 characters, each English letter counts as 1 character), and must not contain the school name, an abbreviation of the school name, an English abbreviation of the school name, words such as "队", "团队" or "战队", or special symbols such as "*/-+". The team name must reflect the team's

proactive spirit and comply with national laws and regulations. If the RMOC determines that a team name does not fit the spirit of the competition, it has the right to require the team to change it.

> Note: After a team submits its registration materials, the team name may not be modified.

R3 A team must be based at one institution of higher education, and must meet the personnel role, headcount and identity requirements specified in "2.3 Participants".

R4 In principle, within the same event (challenge), only one team from a school is eligible to participate. If a school's campuses are not in the same city or in similar situations, so that interested students cannot form a team together, the RMOC may, after verification, allow the school to field teams from different campuses. If more than one team from a school registers, the specific registration review rules are given in the "RoboMaster 2027 University Series Representative Team List Announcement". Registrants must ensure that registration information is complete and accurate and bear the corresponding responsibility; registrants bear all consequences of missing or incorrect registration information. In special circumstances, contact the RMOC to explain, and the RMOC will handle the case according to the situation. The RMOC reserves the right of final interpretation.

> Note: If a team fails to meet any of R1-R4, the RMOC will reject its registration application. The team may resubmit after revising it to meet the requirements.

R5 Two schools that do not each have a separate team may form a combined team across schools.

- A. Before a combined team is established, the schools concerned must form it only after fully communicating and planning the team in light of their own circumstances. The operating and R&D costs, personnel allocation and any other disputes arising from the combined team are to be handled and resolved by the schools concerned themselves; the RMOC bears no responsibility.
- B. Once a combined team is established, it may not be split, and it may take part in this season's RMUC only under that combined-team identity. If a combined team that has passed the registration review is split, it is regarded as voluntarily giving up its participation eligibility.
- C. The name of a combined team ends with "联队" (combined team) instead of "战队". The combined team must upload to the registration system a combined-team declaration letter issued by the schools of the participating teams. The template of the declaration letter is given in the registration system step description.

R6 Any participant may take part in only one team throughout this season.

R7 If teams do not satisfy any one of the "five differences" principle, they are regarded as the same team.

> Note: The "five differences" principle: different team names, different team members, different advisors, different affiliated organizations (school units such as colleges), and different participating robots.

R8 Provided that the registration requirements of the relevant events are met, one team may register at the same time for different events of the RoboMaster University Series (including RMUC and RMUL).

R9 The RMOC regards the same team taking part in different events in the same season as a single whole and handles all event affairs (including material donation, material purchase, participation support, etc.) uniformly. After season registration ends, the whole cannot be split.

2.3 Participants

The RoboMaster competition advocates the spirit of teamwork. To encourage participants to actively take on important roles within the team, the RoboMaster RMOC will select awards such as Outstanding Team Mentor and Outstanding Advisor to recognize participants who make positive contributions to RoboMaster events. For details, see "5.7 Outstanding Contribution Award".

The positions and responsibilities of participants are as follows:

> Note: - Participants cannot hold more than one position concurrently among these positions. - Each participant must match the corresponding identity and, when necessary, show relevant proof at the competition venue. - Award eligibility: Team Mentors and Reserve Members are not eligible for awards and can only receive the electronic proof of participation for the current season issued by the RMOC.

Table 2-1 Participant Positions and Responsibilities

Position	Description	Responsibilities	Identity	Count
Advisor	Team advisor	- Responsible for the team's organizational development, daily management and major decisions - Responsible for the team's culture, helping members establish positive cultural values - Responsible for the team's inheritance and development - Guide the team in building robots - Coordinate on-campus resources, guide the team in drawing up the project plan, and help the team complete the competition smoothly - During the competition, ensure the personal and property safety of all team members - During the competition, actively cooperate with the work of the RMOC	Faculty or staff who will graduate before March 2027 and who hold research or teaching qualifications at the school between September 2026 and August 2027	0-7

Position	Description	Responsibilities	Identity	Count
Lead Teacher	- The teacher with overall responsibility among the advisors - The RMOC's main contact teacher	- Responsible for the team's organizational development, daily management and major decisions - Responsible for the team's culture, helping members establish positive cultural values - Responsible for the team's inheritance and development - Guide the team in building robots - Coordinate on-campus resources, guide the team in drawing up the project plan, and help the team complete the competition smoothly - During the competition, ensure the personal and property safety of all team members - During the competition, actively cooperate with the work of the RMOC	Faculty or staff who will graduate before March 2027 and who hold research or teaching qualifications at the school between September 2026 and August 2027	1
Team Mentor	Provides guidance and support on competition experience to the current team	- Provide the team with guidance and support in technical innovation, tactical design, team management, team building, etc. - Serve the team's inheritance - May undertake actual robot-building work and other competition affairs	- Has competition experience with any team in past RMU seasons - Full-time junior college, undergraduate, master's and doctoral students, etc. of institutions of higher education who hold proof of enrollment at the school between September 2026 and August 2027	0-5
Official Team Member	Includes Team Captain, Vice Captain, Project Manager, Operations Manager and Regular Member	See the table below	Full-time junior college, undergraduate, master's and doctoral students, etc. of institutions of higher education who hold proof of enrollment at the school between September 2026 and August 2027	10-35

Position	Description	Responsibilities	Identity	Count
Reserve Member	Reserve members of the team, currently in a personal learning and growth period; may become official team members after being assessed and promoted by the team	Assist official team members in completing the competition	Full-time junior college, undergraduate, master's and doctoral students, etc. of institutions of higher education who hold proof of enrollment at the school between September 2026 and August 2027	0-20

Table 2-2 Official Team Member Positions and Responsibilities

Position	Description	Responsibilities	Count
Team Captain	- Core team member - Person in charge of technology and tactics - Person in charge of culture building - The RMOC's main contact person	- Responsible for forming the team, identifying and deploying talent and arranging the lineup; overall responsible for personnel selection and training, allocation of team slots and award slots, daily personnel management and replacement - Responsible for overseeing the formulation and review of technical and tactical plans, identifying risks and making major decisions - Responsible for building team culture, helping members establish positive cultural values - Responsible for preserving the team's technical, management and other documents, building process mechanisms and conducting retrospectives and iteration, helping the team's inheritance and development - During the competition, must maintain order among the personnel at the venue, and organize participation in the captains' meeting and key match processes such as confirming each match result and filing appeals	1

Position	Description	Responsibilities	Count
Vice Captain	Core team member	- Forms the team's core management layer together with the Team Captain - Assists the Team Captain in managing the team	0-3
Project Manager	- Core team member - Manager of project progress and risks	- Responsible for drawing up plans for each stage of the competition (goals, schedule, cost), collecting feedback on related needs and suggestions, controlling the process of each task, identifying and warning of project risks, and closing the loop on results - Responsible for internal team communication and coordination, helping with team building and institutional system building, and resolving resource and schedule problems encountered by the project - Responsible for researching the processes, methods, tools and systems of project management in the team, and promoting and implementing them in the team Note: - It is recommended that the Project Manager understand PMP fundamentals and study general project management concepts and theory - As an important management member of the team, the Project Manager is recommended to work closely with each robot R&D sub-project, take part in and witness the whole process from robot design to production, and proactively learn the necessary basic knowledge	1

Position	Description	Responsibilities	Count
Operations Manager	- Core team member - Responsible for building the business of operations modules such as team publicity, sponsorship, logistics and finance - Executor of team culture inheritance and building	- [Team Building] Oversee the team's overall operating rhythm and establish a standardized internal operating mechanism; allocate resources and control operating costs reasonably, provide solid logistics support for the technical R&D team and reduce the pressure of competition preparation - [Culture Inheritance] Establish and improve the team's archive (including technical iteration history, members' destinations, honors and achievements, etc.), form standardized documents and SOPs, and carry forward the team's culture and assets - [Publicity Output] Formulate an annual publicity strategy and, combining event hot topics with team stories, produce high-quality team content through videos, articles and images, community activities and other forms, so that members have a strong sense of belonging to the team	1-4

Position	Description	Responsibilities	Count
		- [Business Ecosystem] Actively respond to and strictly implement the official sponsorship standards and management requirements; formulate the team's sponsorship strategy, set up a team fund and related support organizations, and obtain funding, equipment and other sponsorship support for the team to feed back into the team's development	1-4
Regular Member	Basic member of the team	-	0-32

Official team members and Team Mentors may also hold the following concurrent positions as required, including but not limited to: Captain-Elect, Technical Group Leader, Robot Type Group Leader and Quality Management.

Table 2-3 Concurrent Positions

Position	Description	Responsibilities	Count
Captain-Elect	The next-term Team Captain candidate who has been determined by the team and announced within the team	- Gradually become familiar with team management processes and accumulate experience for serving as the official Team Captain next season - Take part in core competition processes and team management at the competition venue	When submitting the Regional Competition list, the team must designate 1 official team member as the Captain-Elect candidate
Technical Group Leader	Person in charge of a single technical direction (including mechanical, algorithm, embedded, control, hardware, software)	- Responsible for resource and personnel management of the corresponding technical direction, design of each stage of new-member training, etc. - Assist the Robot Type Group Leaders in coordinating, from the technical group's perspective, the allocation of members of the responsible technical direction across the robot type groups	0-1 per technical direction

Position	Description	Responsibilities	Count
Robot Type Group Leader	Person in charge of a single robot type (Heavy Robot, Infantry Robot, Sentry Robot, aerial system, Radar System, Dart System)	- Responsible for the underlying architecture design of the corresponding robot type and decisions on key technical directions - Work with the Technical Group Leaders to make reasonable use, from the robot type group's perspective, of the resources the team can allocate to the corresponding robot type	1 per robot type
Quality Management	- Person in charge of robot R&D quality - Establish and maintain the quality management system	- Responsible for designing robot test processes, test cases and test methods, and organizing function, stability, lifetime and other tests at each stage of R&D, to ensure the stability of the robot's preset functions	1-2

Position	Description	Responsibilities	Count
		- Take part in improving test methods and developing test tools, to raise the team's testing efficiency and test quality	1-2

2.4 Personnel Directions

When the Team Captain submits the list in the registration system, the direction of each official team member and Team Mentor must be selected. The categories are as follows:

Table 2-4 Personnel Direction Categories

Direction	Description	Related Majors
Mechanical	Carries out robot structural design, assembly and maintenance; responsible for the design cost and reliability of the robot structure.	Theoretical and Applied Mechanics; Engineering Mechanics; Mechanical Engineering; Mechanical Design, Manufacturing and Automation; Mechatronics Engineering, etc.
Algorithm	Carries out the design and development of robot vision, navigation, and planning and decision-making algorithms, and the selection and debugging of the robot computing platform; responsible for the design cost and reliability of the components related to the robot computing platform and of the host-computer algorithms.	Automation; Artificial Intelligence; Robotics Engineering; Computer Science and Technology; Software Engineering; Electronic and Computer Engineering, etc.
Embedded	Carries out writing of low-level robot drivers, deployment of the operating system, and configuration and development of communication protocols; responsible for the reliability of interaction between the microcontroller of the embedded platform and sensors and actuators, and for system stability.	Electronic Information Engineering; Communication Engineering; Internet of Things Engineering; Automation; Computer Science and Technology; Measurement and Control Technology and Instruments; Electrical Engineering and Automation, etc.
Control	Carries out robot kinematic modeling and the design and implementation of control strategies; responsible for the output accuracy of robot motion commands and for the speed and stability of the whole robot's motion response.	Automation; Electrical Engineering and Intelligent Control; Intelligent Equipment and Systems; Robotics Engineering; Mechatronics Engineering; Electronic Information Engineering; Communication Engineering, etc.
Hardware	Carries out the selection, design and development of the robot hardware platform (including but not limited to supercapacitors, control boards, motors and ESCs); responsible for the design cost and reliability of the robot hardware platform.	Electronic Information Engineering; Electronic Science and Technology; Microelectronics Science and Engineering; Integrated Circuit Design and Integrated Systems, etc.

Direction	Description	Related Majors
Software	Carries out development of the competition robot custom client, host-computer software and various debugging tools, as well as other application software that helps team building and development, such as team member management system development and simulator development.	Computer Science and Technology; Software Engineering; Data Science and Big Data Technology; Network Engineering; Electronic Information Engineering, etc.
Operations	Operations is subdivided into: publicity, sponsorship, logistics, finance	/

2.5 Rules Communication

The RMOC provides the following communication channels. Working hours are: weekdays 10:30-12:30 and 14:00-19:30. For more contact methods of the RMOC and the Q&A standards, see the RoboMaster RMOC Official Channels Summary and Q&A Standards.

Table 2-5 Communication Channels

WeChat	(QR code)

> Note: When adding on WeChat, please include the remark [School Name + Position + Name].

3 Season Schedule

> Note: The season schedule is for reference only; the exact times are subject to the latest announcements published by the RMOC.

The RMUC 2027 season schedule is divided into an online schedule and an offline schedule. The RMOC recommends that teams draw up this season's preparation plan, robot-building budget and plan in advance, and assess manpower and funding needs, to avoid wasting funds.

A team must complete registration and complete and pass the corresponding Technical Assessment before the deadline to obtain participation eligibility, and may obtain the corresponding RoboMaster product education discount (hereinafter "product discount") provided by the RMOC.

- For the Technical Assessment rules, see "4 Technical Assessment".
- For the product discount corresponding to each Technical Assessment stage, see the "RoboMaster 2027 Purchase Instructions for Materials".

Table 3-1 Online Schedule

Schedule	Stage	Description
15:00 on 2026-10-20 to 15:00 on 2026-10-27	Registration	Log in to the RoboMaster forum and complete registration as required
15:00 on 2026-11-18 to 15:00 on 2026-11-19	Technical Assessment: Season Planning	- Obtain the product discount corresponding to this stage - Obtain permission to submit the Rules Test
15:00 on 2026-12-16 to 15:00 on 2026-12-17	Technical Assessment: Rules Test	- Obtain the product discount corresponding to this stage - Obtain permission to submit the Mid-Term Progress Document
15:00 on 2027-01-06 to 15:00 on 2027-01-07	Technical Assessment: Mid-Term Progress Document	- May borrow one Referee System set each for the Heavy Robot, Infantry Robot and Sentry Robot - Obtain eligibility to take part in the Referee System Assessment Note: Teams that also take part in the RMUL 2027 3V3 competition and pass this stage cannot collect the Referee System twice.

Schedule	Stage	Description
15:00 on 2027-03-01 to 15:00 on 2027-03-04	Technical Assessment: Referee System Assessment	- Obtain permission to borrow the full Referee System set - Obtain eligibility for the offline events and permission to submit Participation Feedback
15:00 on 2027-03-01 to 15:00 on 2027-03-03	Technical Assessment: Full-Form Assessment, document part	- Obtain permission to borrow the full Referee System set - Obtain eligibility for the offline events and permission to submit Participation Feedback
15:00 on 2027-03-08 to 15:00 on 2027-03-10	Technical Assessment: Full-Form Assessment, video part	- Obtain permission to borrow the full Referee System set - Obtain eligibility for the offline events and permission to submit Participation Feedback
15:00 on 2027-04-09 to 15:00 on 2027-04-13	Participation Feedback	Teams first select their preferred Regional Competition site; the RMOC will decide the final list of teams for each site based on the school's location and the points leaderboard ranking
June 2027	Technical Assessment: Regional Competition Season Summary	Obtain eligibility for Regional Competition prize money payout
August 2027	Technical Assessment: Final Tournament Season Summary	Obtain eligibility for Final Tournament prize money payout

Table 3-2 Offline Schedule

Schedule	Event
May 2027 - June 2027	Regional Competition (Mainland sites)
July 2027 - August 2027	Final Tournament

4 Technical Assessment

The Technical Assessment lets teams demonstrate their technical level, guides reasonable preparation planning and the team's inheritance and development, and trains participants' comprehensive abilities in requirements analysis, cost budgeting, data analysis and report writing. All teams must complete the corresponding Technical Assessment stages within the specified time ranges according to the RMOC's requirements, take the initiative, and fully demonstrate the team's strength.

RMUC 2027 mainly includes six Technical Assessment stages: Season Planning, Rules Test, Mid-Term Progress Document, Referee System Assessment, Full-Form Assessment and Season Summary. The latest tasks and requirements of each Technical Assessment stage are subject to forum announcements. For the schedule of each stage, see "3 Season Schedule".

The submission standards for tables and videos in each Technical Assessment stage are as follows:

> Note: Tables and videos must be attached to the forum report of each stage as attachments.

Table 4-1 Submission Content Standards

Document Type	Standard
Table	- Format: Excel - Font: Source Han Serif - Regular (Chinese) or OpenSans-Regular (English) - Table format: enable text wrapping, auto-fit row height and column width - Alignment: unless specially necessary, keep all text vertically centered, and uniformly left-aligned or center-aligned horizontally
Video	- Resolution: higher than 720P - Upload method: upload the video to the report attachments - Content: - Include subtitles or placards explaining every process in the video - Show only effective content; keep the video pace compact and within the specified duration

4.1 Season Planning

Number of submissions: 1 Pass condition: Obtain a grade of "C" or above Submission content and requirements:

- Planning document: RoboMaster forum report text, no word limit (use concise language)
- Schedule: Excel document
- Team budget: Excel document

4.2 Rules Test

The Rules Test covers: the "RoboMaster 2027 University Series Robot Building Specifications Manual", the "RoboMaster 2027 RMUC Rules Manual" and related competition provisions.

4.3 Mid-Term Progress Document

Number of submissions: 1 Pass condition:

- Project document grade of "C" or above

Submission content and requirements:

- Schedule (updated): Excel document
- Project analysis: RoboMaster forum report text

4.4 Referee System Assessment

The Referee System Assessment content mainly includes: the "RoboMaster 2027 University Series Robot Building Specifications Manual", the "RoboMaster Referee System User Manual", the Referee System FAQ, the Referee System onboard module manuals, and other content on the installation standards, usage and common problem handling of the onboard Referee System modules. The Referee System Assessment is conducted as an online video assessment, with each team sending the specified number of members to take part. A team that completes the assessment as required and meets the pass standard is regarded as having passed the Referee System Assessment stage.

4.5 Full-Form Assessment

Number of submissions: 1 Pass condition: Among teams whose project document and technical plan grades reach "C" or above, teams are ranked by Full-Form Showcase assessment score from high to low, and the top 96 teams are regarded as passing this assessment Submission content and requirements:

- Full-Form Showcase: video
- Technical plan: RoboMaster forum report text
- Project document:
- Cost report: RoboMaster forum report text
- Expenditure ledger: Excel document
- Project analysis: RoboMaster forum report text
- Robot type BOM: Excel document

4.6 Season Summary

Number of submissions: 1 Pass condition: Obtain a grade of "C" or above Submission content and requirements:

Summary document: RoboMaster forum report text

5 Awards

> Note: - Award settings are subject to the latest Participant Manual or official website announcements. Award names may be adjusted later; the certificates actually issued prevail. - If a team that has obtained qualification does not complete the check-in process, it is by default ineligible for any award. - If a team that has obtained qualification completes the check-in process but does not compete, its unplayed matches are recorded as a loss by forfeit; if all of its matches are recorded as a loss by forfeit, the team is ineligible for any award.

5.1 Regional Competition

The awards for the Regional Competition are as follows:

Table 5-1 Regional Competition Awards

Award	Ranking	Quantity	Reward
Regional First Prize	Regional Champion: Regional 1st place	1 per region	- Champion trophy - Regional First Prize certificate - Prize money of RMB 30,000 (before tax)
Regional First Prize	Regional Runner-up: Regional 2nd place	1 per region	- Runner-up trophy - Regional First Prize certificate - Prize money of RMB 30,000 (before tax)
Regional First Prize	Regional Third Place: Regional 3rd place	1 per region	- Third-place trophy - Regional First Prize certificate - Prize money of RMB 30,000 (before tax)
Regional First Prize	Regional Fourth Place: Regional 4th place	1 per region	- Fourth-place trophy - Regional First Prize certificate - Prize money of RMB 30,000 (before tax)
Regional First Prize	Regional 5th-8th place	4 per region	- Regional First Prize certificate

Award	Ranking	Quantity	Reward
Regional First Prize	(continued)	(continued)	- Prize money of RMB 15,000 (before tax)
Regional First Prize	Regional 9th-16th place	8 per region	- Regional First Prize certificate - Prize money of RMB 8,000 (before tax)
Regional Second Prize	Regional 17th-32nd place	16 per region	Regional Second Prize certificate

5.2 Final Tournament

The awards for the Final Tournament are as follows:

> Note: The prize money for teams ranked in the top 16 (inclusive) of the Final Tournament consists of 3 independent parts. Each part's prize money is obtained by meeting the corresponding requirements. The prize money in "Table 5-2 Final Tournament Awards" is the total amount. - Part 1: Competition results, 80%. - Part 2: Open-source technology, 10%. Award-winning teams must open-source the materials for the robot types designated by the RMOC in accordance with the specifications. The RMOC will add open-source awards depending on the open-source results. - Part 3: Team legacy analysis, 10%. Award-winning teams must submit materials on personnel retention and technical accumulation as evidence of building team legacy, and open-source the "Team Legacy Analysis" content of the season summary.

Table 5-2 Final Tournament Awards

Award	Ranking	Quantity	Reward
National First Prize	Champion: 1st place	1	- Champion trophy - Champion medal - First Prize certificate - Prize money of RMB 150,000 (before tax)
National First Prize	Runner-up: 2nd place	1	- Runner-up trophy - Runner-up medal - First Prize certificate - Prize money of RMB 150,000 (before tax)

Award	Ranking	Quantity	Reward
National First Prize	Third Place: 3rd place	1	- Third-place trophy - Third-place medal - First Prize certificate - Prize money of RMB 150,000 (before tax)
National First Prize	Fourth Place: 4th place	1	- Fourth-place trophy - Fourth-place medal - First Prize certificate - Prize money of RMB 150,000 (before tax)
National First Prize	5th-16th place	12	- First Prize certificate - Prize money of RMB 30,000 (before tax)
National Second Prize	17th-32nd place	16	- Second Prize certificate - Prize money of RMB 10,000 (before tax)
National Second Prize	Teams that advanced to the Revival Tournament through the Regional Competition but did not advance to the Final Tournament	12	- Second Prize certificate - Prize money of RMB 8,000 (before tax)
National Third Prize	Teams that won a Regional First Prize but did not advance to the Final Tournament	4	Third Prize certificate
National Third Prize	17th-32nd place in each region	48	Third Prize certificate

5.3 Open-Source Awards

Teams applying for Open-Source Awards must open-source their core technologies or operations and management methods through channels such as the RoboMaster forum during the 2027 season (May to August 2027), in order to promote the development of the RoboMaster competition and to promote engineering culture and spirit.

The Open-Source Awards have no fixed number of winners. The RMOC will select winners according to the completeness and quality of the submitted open-source materials and plans (including but not limited to software, hardware and mechanical). If none of the open-source projects is especially outstanding, the Open-Source Special Prize will have no winner; if several are outstanding, multiple Open-Source Special Prizes may be awarded.

5.3.1 Award Settings

The Open-Source Awards are as follows:

Table 5-3 Open-Source Awards

Award	Quantity	Reward
Open-Source Special Prize	Several	- Certificate (team) - RMB 100,000 (before tax)
Open-Source First Prize	Several	- Certificate (team) - RMB 50,000 (before tax)
Open-Source Second Prize	Several	- Certificate (team) - Prize money of RMB 15,000 to RMB 30,000 (before tax), depending on the result of the comprehensive review of the open-source materials
Open-Source Third Prize	Several	- Certificate (team) - RMB 10,000 (before tax)
Open-Source Excellence Award	Several	- Certificate (team) - Prize money of RMB 2,000 to RMB 5,000 (before tax), depending on the result of the comprehensive review of the open-source materials

5.3.2 Selection Criteria and Process

The RMOC will score the open-source materials on two dimensions: basic format score and content score. For detailed selection rules, see the *RoboMaster University Series Open-Source Award Specifications and Selection Rules*.

1. Teams from mainland China upload their open-source files to the forum and set the content tag correctly according to the open-source content: RM2027 + school name + team name + open-source direction + content description.
2. Teams submit materials through the award application portal (to be opened later) to apply.
3. The RMOC scores the application materials and the quality of the open-source content, and selects the winners.

5.4 Organization Awards

5.4.1 Award Settings

The Organization Awards are as follows:

Table 5-4 Organization Awards

Award	Quantity	Reward
Legacy Torch Award (薪火传承奖)	Several	- Certificate (team) - Prize money of RMB 5,000 (before tax)
Rising Star Award (冉冉新星奖)	No more than 5	- Certificate (team) - Prize money of RMB 3,000 (before tax)
Perseverance Breakthrough Award (砥砺突破奖)	No more than 5	- Certificate (team) - Prize money of RMB 2,000 (before tax)
Cost Control Award (成本控制奖)	No more than 5	- Certificate (team) - Prize money of RMB 1,000 to 3,000 (before tax), depending on the result of the review of the submitted materials
Best Tactics Award (最佳战术奖)	No more than 5	- Certificate (team) - Prize money of RMB 1,000 to 3,000 (before tax), depending on the result of the review of the submitted materials
Best Season Planning Award (最佳赛季规划奖)	No more than 10	- Certificate (team) - Prize money of RMB 1,000 to 5,000 (before tax), depending on the result of the review of the submitted materials
Best Technical Report Award (最佳技术报告奖)	No more than 5	- Certificate (team) - Prize money of RMB 1,000 to 5,000 (before tax), depending on the result of the review of the submitted materials
Sportsmanship Award (竞技品格奖)	No more than 5 in total for the season	Certificate (team)

5.4.2 Selection Criteria and Process

Table 5-5 Organization Award Selection Criteria and Process

Award	Selection criteria	Selection process
Legacy Torch Award	- Has a strong awareness of team legacy; can analyze the team's legacy needs in terms of technical accumulation, institutional development, personnel pipeline and team culture, formulate and implement corresponding systems, and achieve certain results that promote the stable development of the team - Can conduct summaries and reviews according to the actual situation of each season, accumulate effective measures and experience in team legacy, and keep iterating and optimizing - Can summarize effective legacy measures or models that are worth learning from and have a positive influence on other teams	Candidates are either self-nominated or invited to apply. After open-sourcing on the forum, the RMOC will make a comprehensive selection based on the above criteria, combined with the team's actual performance in the season and the submitted application materials
Rising Star Award	- Teams whose results have been stable and improving over two or three consecutive years, including the current season - Teams that have not previously won the Rising Star Award	- Teams with greater progress are given priority - Progress levels: 1. Did not obtain Regional Competition qualification 2. Regional Competition top 32 3. Regional Competition top 16 4. Final Tournament top 32 5. Regional Competition top 4 / Final Tournament top 16 6. Final Tournament top 8 7. Final Tournament top 4
Perseverance Breakthrough Award	Teams whose results once dropped by at least two levels, then improved over the previous season in each of the following two consecutive seasons, with the final result at least three levels higher than the season of decline, achieving a breakthrough in results	- Teams with greater progress are given priority - Progress levels: 1. Did not obtain Regional Competition qualification 2. Regional Competition top 32

Award	Selection criteria	Selection process
Perseverance Breakthrough Award (continued)		3. Regional Competition top 16 4. Final Tournament top 32 5. Regional Competition top 4 / Final Tournament top 16 6. Final Tournament top 8 7. Final Tournament top 4
Cost Control Award	- Cost data is complete and clear, and reflects the cost overview or the results of cost control - The cost control plan and methods are highly feasible - During the preparation period, actively open-sources effective and replicable cost control methods and cases	- After open-sourcing on the forum, participating teams submit review materials, such as cost reports and other supporting materials - The RMOC will select the best based on the cost-related scores of each stage of the Technical Assessment and the materials
Best Tactics Award	- The team shows good sportsmanship and has no serious violations of the competition rules or the spirit of fair play - Through technical means and tactical arrangements, the team reduces reliance on operators' mechanical training and on-the-spot performance - Through open-sourcing and similar means, the team promotes parity of tactical information and lowers the cost of tactical planning for other teams	- After open-sourcing on the forum, participating teams submit review materials, such as tactics formulation process documents and tactics-related execution actions (operator training) - The RMOC will select the best based on match performance and the materials
Best Season Planning Award	Open-sources the current season's "Season Planning", and the score of this item in the Technical Assessment system ranks high among all teams that open-sourced	- Teams submit materials through the award application portal (to be opened later) to apply - The RMOC will compile the open-source materials on the RoboMaster forum and select winners according to the ranking *The open-source post is titled: [Season Planning + School Name + Team Name + RM2027 Season Planning Open Source]

Award	Selection criteria	Selection process
Best Technical Report Award	In the current season's "Complete Form Assessment" stage, the technical solution part received a high rating, and at the end of the season the team refined the technical solution as required by the RMOC into a technical report and open-sourced it	At the end of the season, the RMOC will communicate with and give feedback to teams whose technical solutions received high ratings, and will select among the teams that refined their technical solutions as required by the RMOC and open-sourced them *The open-source post is titled: [Technical Report + School Name + Team Name + RM2027 Technical Report Open Source]
Sportsmanship Award	- The team shows good sportsmanship (referring to the penalties received by the team in official matches) and has no serious violations of the competition rules or the spirit of fair play - The team is active on channels such as the forum and WeChat groups, and gets along well with the RMOC, volunteers and other teams - The team is helpful, actively open-sources, shares its own experience enthusiastically, and is willing to provide resource assistance to other teams	- Selected based on feedback from RMOC staff, other teams and event volunteers - Teams that receive more positive feedback from RMOC staff, other teams and event volunteers are given priority

5.5 Robot Competition Awards

5.5.1 Award Settings

> Note: - The number of Robot Competition Awards is calculated from the selection criteria and the number of all teams in the Regional Competition, using the ratios in the table below. If the result is not an integer, it is rounded to the nearest integer by standard rounding. - The quantity of each award is calculated as: base number of teams eligible for awards * award ratio, rounded to the nearest integer by standard rounding.

The Robot Competition Awards are as follows:

Table 5-6 Robot Competition Awards

Award setting	Description
Robot types	Heavy Robot (output direction, assembly direction), Infantry Robot (two robots), Sentry Robot, Aerial Robot system, Dart System, Radar System

Award setting	Description
Quantity	- First Prize: about 15% - Second Prize: about 25% - Third Prize: several - Excellence Award: several Note: The number of awards at each level for each robot type will be adjusted according to the actual number of teams eligible for awards and the actual performance of each robot in the matches.
Reward	Certificate (team and individual, electronic version)

5.5.2 Selection Criteria and Process

Table 5-7 Robot Competition Award Selection Criteria and Process

Robot type	Maximum number of people	Selection criteria	Selection process
Heavy Robot	Output direction: 7	Average damage per hour: total damage caused by the robot / total duration of the official matches of the team the robot belongs to	- The data used are the match data of the Regional Competition. - Based on each robot's actual performance in the matches, specific data are selected for ranking. If a robot type has multiple robots, the robot with the best data is ranked. Awards are given according to a certain ratio. Robots that obtain candidacy and the minimum award qualification must have server records of playing in matches. - For technical reasons, when a robot causes projectile damage in a match, the Referee System may fail to detect the specific source of the damage. In this case, this unattributed damage will be divided according to the proportion of projectile damage of this type already caused by each robot under each type of hit target, and used as the final basis for the award.

Robot type	Maximum number of people	Selection criteria	Selection process
Heavy Robot	Assembly direction: 5	Average assembly score efficiency per round: total assembly score / total time taken to complete all assemblies Level 1 difficulty scores 1 point each time, Level 2 scores 10 points each time, Level 3 scores 20 points each time, Level 4 scores 100 points each time	- The data used are the match data of the Regional Competition. - Based on each robot's actual performance in the matches, specific data are selected for ranking. If a robot type has multiple robots, the robot with the best data is ranked. Awards are given according to a certain ratio. Robots that obtain candidacy and the minimum award qualification must have server records of playing in matches. - For technical reasons, when a robot causes projectile damage in a match, the Referee System may fail to detect the specific source of the damage. In this case, this unattributed damage will be divided according to the proportion of projectile damage of this type already caused by each robot under each type of hit target, and used as the final basis for the award.

Robot type	Maximum number of people	Selection criteria	Selection process
Infantry Robot	6 people * 2	Average damage per hour (total damage caused by the robot / total duration of the official matches of the team the robot belongs to) *For each team, the Infantry Robot with the higher average damage per hour is ranked	- The data used are the match data of the Regional Competition. - Based on each robot's actual performance in the matches, specific data are selected for ranking. If a robot type has multiple robots, the robot with the best data is ranked. Awards are given according to a certain ratio. Robots that obtain candidacy and the minimum award qualification must have server records of playing in matches. - For technical reasons, when a robot causes projectile damage in a match, the Referee System may fail to detect the specific source of the damage. In this case, this unattributed damage will be divided according to the proportion of projectile damage of this type already caused by each robot under each type of hit target, and used as the final basis for the award.

Robot type	Maximum number of people	Selection criteria	Selection process
Sentry Robot	6	Average damage per hour (total damage caused by the robot / total duration of the official matches of the team the robot belongs to)	- The data used are the match data of the Regional Competition. - Based on each robot's actual performance in the matches, specific data are selected for ranking. If a robot type has multiple robots, the robot with the best data is ranked. Awards are given according to a certain ratio. Robots that obtain candidacy and the minimum award qualification must have server records of playing in matches. - For technical reasons, when a robot causes projectile damage in a match, the Referee System may fail to detect the specific source of the damage. In this case, this unattributed damage will be divided according to the proportion of projectile damage of this type already caused by each robot under each type of hit target, and used as the final basis for the award.

Robot type	Maximum number of people	Selection criteria	Selection process
Aerial Robot system	7	Average damage per hour (total damage caused by the robot / total duration of the official matches of the team the robot belongs to)	(merged cell continued from p.28; blank on this page)
Dart System	5	Average hit score per round (hitting the Outpost scores 1 point, hitting the fixed target of the Base scores 5 points, hitting the random fixed target of the Base scores 10 points, hitting the random moving target of the Base scores 100 points, hitting the end moving target of the Base scores 200 points)	(merged cell continued from p.28; blank on this page)
Radar System	4	Average Radar performance score per hour ((cumulative accurate marking time * 1 + difficulty level of successfully decoded information wave * 200) / total duration of the official matches of the team the Radar belongs to)	(merged cell continued from p.28; blank on this page)

5.6 Annual Technology Breakthrough Awards

Teams winning the Annual Technology Breakthrough Awards must open-source the corresponding robot type in accordance with the specifications; otherwise, the payment of the prize money will be affected. The RMOC will add open-source awards depending on the open-source results (the prize money is the highest item).

5.6.1 Award Settings

Table 5-8 Annual Technology Breakthrough Awards

Award	Quantity	Reward
Annual Technology Breakthrough First Prize	No more than 1 per robot type	- Certificate (group) - Prize money of RMB 15,000 (before tax)
Annual Technology Breakthrough Second Prize	No more than 2 per robot type	- Certificate (group) - Prize money of RMB 10,000 (before tax)
Annual Technology Breakthrough Third Prize	No more than 3 per robot type	- Certificate (group)

Award	Quantity	Reward
Annual Technology Breakthrough Third Prize	No more than 3 per robot type	- Prize money of RMB 5,000 (before tax)
Annual Technology Breakthrough Excellence Award	Several	Certificate (team)

5.6.2 Selection Criteria and Process

The RMOC conducts a comprehensive review across multiple dimensions, including theory guiding practice in the robot type design, match performance, and technical innovation and breakthroughs, and selects the First, Second and Third Prizes and the Excellence Award.

5.7 Outstanding Contribution Awards

The team of an Outstanding Contribution Award winner must show good sportsmanship and have no serious violations of the competition rules or the spirit of fair play.

> Note: - In the RMUC, the selection processes for Outstanding Team Leader (group) and Outstanding Project Management will not be set up separately. Team leaders (groups) and project managers may take part in the RM Award (Management) selection process, and the final winners will also receive the corresponding certificate (individual, electronic version). - Winners of Outstanding Operations Manager and Outstanding Team Advisor must, within one month and two weeks after the selection results are announced, publish a management/ operations experience share on the RoboMaster forum, and are obliged to attend exchange meetings and surveys held by the RMOC.

5.7.1 Award Settings

The Outstanding Contribution Awards are as follows:

Table 5-9 Outstanding Contribution Awards

Award	Quantity	Reward
Outstanding Advisor (group)	No more than 10 groups in total for the season	- Certificate (individual) - Prize money of RMB 8,000 (before tax)
Outstanding Operations Manager	No more than 8 people in total for the season	- Certificate (individual) - Prize money of RMB 5,000 (before tax)
Outstanding Team Advisor	No more than 8 people in total for the season	- Certificate (individual) - Prize money of RMB 3,000 (before tax)

5.7.2 Selection Criteria and Process

Table 5-10 Outstanding Contribution Award Selection Criteria and Process

Award	Selection criteria	Selection method
Outstanding Advisor (group)	- Guides the student team and its culture building with a high sense of responsibility, is conscientious toward every team member, cares about students' growth and development in the competition field, and is deeply loved by students. - Leads the team toward sustained, healthy development and progress, and guides the team in legacy work such as technical accumulation, core member retention and resource coordination. - Improves or optimizes the team management system for the current season, including but not limited to organizational structure, division of labor, assessment system and training system, with demonstrated results in actual operation, promoting the long-term stable development of the team. - Discovers outstanding talent in the team, provides guidance and support for members' further study and employment, and actively supports and participates in RoboMaster talent recommendation work in accordance with the relevant procedures.	- Candidates submit materials through the award portal (to be opened later) to apply, and the RMOC will select the best based on the materials. - If the *Policy on Talent Recommendation by Advisors for the RoboMaster University Series* is satisfied, the RMOC will add a "Taoli Fenfang" (桃李芬芳) bonus based on the recommendations: RMB 1,000 per person * number of successfully recommended people (before tax).
Outstanding Operations Manager	- [Team building] Establishes and accumulates a mature team operations methodology that effectively improves team cohesion and management efficiency; can properly mobilize resources from all parties to ensure the overall health and sound operation of the team. - [Cultural legacy] Has a fairly mature cultural dissemination system; has well-organized archives of talent and technical achievements over the years; the competition culture is deeply rooted, and team members show a high sense of cultural identification with the competition in the official culture survey. - [Publicity output] Publicity content is highly creative and of high quality, producing impressive	Candidates submit materials through the award portal (to be opened later) to apply, and the RMOC will select the best based on the materials.

Award	Selection criteria	Selection method
Outstanding Operations Manager (continued)	dissemination cases, and has built high visibility and positive influence within the school and across the whole competition ecosystem. - [Business ecosystem] Is deeply aligned with the official commercialization standards, submits high-quality sponsorship plans, and successfully lands high-value, sustainable internal and external cooperation projects.	Candidates submit materials through the award portal (to be opened later) to apply, and the RMOC will select the best based on the materials.
Outstanding Team Advisor	- Serves the team's legacy, and leads veteran members to provide the necessary support to the team; provides constructive and practical suggestions and guidance in terms of technical accumulation, institutional development, personnel pipeline and team culture. - Leaves their own experience to the team in the form of technical documents or process mechanisms, helping the team with technical accumulation and management building and promoting the long-term stable development of the team.	Candidates fill in a questionnaire to apply, and the RMOC will select the best based on the application forms.

5.8 RM Award

The RM Award aims to promote the spirit and culture of outstanding young engineers, to set role models, and to encourage RoboMaster participants to practice the cultural values of the competition and actively exert their personal influence.

The award has no fixed number of winners. The RMOC selects winners based on the materials submitted by candidates and the results of the defense interview.

5.8.1 Award Settings

Table 5-11 RM Award Settings

Award	Quantity	Reward
RM Award (Technology)	Several	- Certificate (individual) - Prize money of RMB 10,000 (before tax) - Interview fast-track card

Award	Quantity	Reward
RM Award (Management)	Several	- Certificate (individual) - Prize money of RMB 10,000 (before tax) - Interview fast-track card

5.8.2 Selection Criteria and Process

Table 5-12 RM Award Selection Criteria and Process

Award	Selection criteria	Selection process
RM Award (Technology)	- In daily R&D work, practices the competition culture and spirit of "investigating things to extend knowledge" (格物致知). - Has the willingness and ability to learn; in new knowledge areas, can explore the underlying principles and apply them to actual R&D tasks. - Seeks challenges and rises to difficulties; makes a significant contribution on technical advancement or bottleneck problems, and their personal spirit influences others on the team to pursue technical breakthroughs better. - The core content of the application materials must be something the applicant achieved for the first time in the competition, or a clear breakthrough or improvement over other existing solutions, and the technical solution must have been put into practical use during preparation or during the competition.	- After the Regional Competition ends, candidates submit application materials according to the award requirements - After candidates apply, the RMOC conducts an initial screening based on the application materials - After passing the initial screening, the RMOC selects the best based on the individual defense Note: For the detailed selection process of RM AWARD 2027, please watch for later announcements.
RM Award (Management)	- Has management awareness; proactively accumulates management systems to manage personnel, progress and cost within the team, and leads the team to achieve its goals. - Has strong thinking ability; can grasp the main contradiction and analyze the root cause of problems; can identify risks within the team and make major decisions. - Is highly motivated with high standards; actively tackles difficulties and is willing to break limits; leads by example and takes the lead in practicing the competition culture and spirit.	- After the Regional Competition ends, candidates submit application materials according to the award requirements - After candidates apply, the RMOC conducts an initial screening based on the application materials - After passing the initial screening, the RMOC selects the best based on the individual defense Note: For the detailed selection process of RM AWARD 2027, please watch for later announcements.

Award	Selection criteria	Selection process
RM Award (Management) (continued)	- Has good organizational, communication and collaborative-advancement skills; can establish smooth, efficient and positive communication mechanisms around the team's goals - The core content of the application materials must be the applicant's main contributions and optimizations since taking office	(merged cell with the row above; blank on this page)

Appendix Competition Safety Notice

All RoboMaster participants must fully understand that safety is the most important prerequisite for the sustained development of the competition. To protect the rights and interests of all participants and the event organizers, and in accordance with relevant laws and regulations, by registering for the RoboMaster competition all participants acknowledge and abide by the following safety terms:

1. All participants must ensure that they have full capacity for civil conduct and the ability to build and operate robots independently, and must ensure that, before building robots with products of the event organizer, SZ DJI Technology Co., Ltd., they have carefully read the registration notice, competition rules and other related documents.
2. During the event, ensure that the building, testing and use of all robots will not cause injury to teammates or opposing team members, referees, staff, spectators, equipment or the competition venue.
3. Ensure that the robot structure design takes into account the convenience of the robot safety inspection during Pre-Match Inspection, and actively cooperate with the organizer's Pre-Match Inspection.
4. The use of fuel-powered engines, explosives and hazardous chemical materials is prohibited, as is the use of hydraulic or other power methods that may cause pollution.
5. At any time during R&D, preparation and competition, team members must pay full attention to safety and comply with the *RoboMaster University Series Battery Safety Specifications*; advisors must take responsibility for safety guidance and supervision.
6. Ensure the safety of the robots, ensure that their launching mechanisms are in a safe state, and ensure that at no time will they directly or indirectly injure team members, referees, staff or spectators.
7. During R&D, training and competition, take sufficient and necessary safety measures against possible accidents, for example: wear protective goggles; avoid loss of control of the control system; urge team members to think through operation steps in advance to avoid mis-operation and collisions between team members and between team members and robots; strictly prohibit team members from training alone, to ensure someone can respond to an accident in an emergency; when debugging, appropriate safety measures such as locking and adding an emergency stop switch must be applied in the robot system.
8. For all accident liability and corresponding losses arising during practice and competition from robot malfunction, unmanned aerial vehicle loss of control in flight, or similar accidents, the team that caused the accident is solely responsible.
9. Each team must strictly abide by local laws and regulations on flight control. Flights by a team's Aerial Robot above specific restricted areas of the competition field in the venue are indoor flights and do not involve airspace approval. To ensure the flight safety of the Aerial Robot, it is connected to a ground fixing stake by a rope. If an accident occurs, such as the Aerial Robot breaking free of the safety rope, the pilot must land and stop the propellers as soon as possible, and continued flight is strictly prohibited. Flying a team's Aerial Robot outdoors is strictly prohibited.
10. Items sold and provided by the event organizer, SZ DJI Technology Co., Ltd., such as batteries and the Referee System, must be used according to the instruction documents. If improper use causes harm to anyone, SZ DJI Technology Co., Ltd. bears no responsibility. Personal injury and property loss to the team itself or any third party caused by building or operating robots are borne by the team.

11. Strictly comply with national or regional laws, regulations and related provisions; ensure that robots are used only for RoboMaster-related activities and competitions, are not illegally modified, and are not used for any other illegal purpose.
